Character Spacing
- add a space before successive parameter arguments (foo(x, y, z))
- add a space before and after operation symbols (=, +, ...)
- no space before or after array indices
- no space between function definition name and parameters
- Space between function name parameters and opening brace

Blank Lines
- add a blank line after each function
- Add blank line after variable declarations at the start of functions

Indentation
- 4 spaces
- Add indentation for lines within another "block"

Brace Placements
- Opening brace/parenthesis on the same line, closing brace/parenthesis on a new line.
    - foo(x, y, z) {
        code
    }

Maximum Line Length
- 125 characters

Variable Declaration Placement and Alignment
- declare new variable on new line
- declare new variables at the beginning of the function
    - Exceptions include for loop counters and temp variables

Case Statement Alignment
- "Else" on same line as "if" closing bracket separated by a space
    - if () {
        } else {
        }

Comment Layout
- Header comment for entering blocks
- Same line comments inside blocks

User Defined
- Variable Naming Convention
    - Lower camel case for variables, functions, and attributes
    - Upper camel case for classes, interfaces, and entities etc.

Enforcement
- Use VSCode style guide enforcement on file save.
- Hold each group member accountable for following
